PROFESSIONAL SUMMARY

Full Stack Developer, 3 years commercial experience. I build with React, TypeScript and Node.js — end to end, from database schema to deployed UI. I've worked across SaaS, edtech and manufacturing, shipping features that moved real metrics: 40% faster dev cycles, 50% fewer production bugs, Lighthouse scores in the 90s. Along the way I've shipped features used by thousands of people, built component libraries adopted across multiple teams, and cut onboarding time from weeks to days. I graduated with a First Class in 2025 and I'm now looking for my next role in London.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL
Frontend:	React 18, Next.js 14, Redux Toolkit, React Query, Zustand, Tailwind CSS, Radix UI, Storybook 8
Backend & Database:	Node.js, Fastify, Express.js, REST APIs, GraphQL, JWT Auth, WebSockets (Socket.io), PostgreSQL, TimescaleDB, MongoDB, MySQL, Redis, Prisma ORM
Cloud & DevOps:	Git, GitHub Actions, Docker, Google Cloud Run, AWS (EC2, S3, CloudFront), Vercel, Nginx, CI/CD
Testing & Practices:	Jest, React Testing Library, Cypress, Playwright, Vitest, Agile/Scrum, Test-Driven Development (TDD)

PROFESSIONAL EXPERIENCE

Northumbria University (IT Department) • London, UK

Jan 2024 – Sep 2024

Software Engineer Intern

- Architected and deployed 12 high-performance RESTful API endpoints utilizing Node.js and Express, supporting 4 core internal university applications and reducing average database retrieval latency by 35%.
- Engineered a highly reusable React and TypeScript component ecosystem containing 28 components, driving a 40% reduction in subsequent feature development lifecycles while completely removing UI visual regressions.
- Led the architectural migration of 6 critical legacy jQuery routes to modern single-page React environments, boosting target web performance metrics from an average baseline of 52 to a certified 88 score on Lighthouse.
- Designed highly performant MongoDB schemas incorporating compound indexing strategies and complex aggregation pipelines for 3 analytical tracking reporting tools, dropping complex query times by up to 60%.
- Fulfilled 100% of pipeline scope commitments over 8 consecutive two-week Agile sprints within a multi-disciplinary team of 6 engineers, ensuring zero product rollbacks in the production cloud cluster.

Myanmar Golden Eagle Co., Ltd • Corporate

May 2023 – Dec 2023

Full Stack Developer

- Conceived and executed a real-time production analytics workspace utilizing React and Chart.js, replacing archaic manual spreadsheet infrastructure for 80 factory workers and saving 15 manual staff hours weekly.
- Developed an enterprise Node.js and Express API backend powered by MySQL to securely manage over 500 high-frequency daily operational records under ultra-low, sub-200ms processing boundaries.
- Authored robust JSON Web Token (JWT) authorization controls and granular Role-Based Access Control (RBAC) schemas across 4 operational user profiles, securing approval on a thorough external audit with zero vulnerabilities discovered.
- Achieved a verified 78% Jest testing code coverage milestone across all critical API gateways, successfully minimizing ongoing production issue counts by 50% across a 6-month operational cycle.
- Documented extensive REST architectures using JSDoc API methodologies, accelerating engineering team expansion onboarding timelines from 3 weeks down to a highly efficient 1-week timeline.

Full Stack Developer

- Shipped 8 global product components for WordPress.com utilizing React, Node.js, and WordPress core APIs, adhering to strict peer-reviewed distributed enterprise engineering standards.
- Refactored 3 high-volume customer UI paths with Tailwind CSS utility workflows, successfully shrinking customer-reported visual discrepancies by 30% sequentially quarter-over-quarter.
- Integrated end-to-end payment structures via Stripe API alongside secure Firebase microservices, aiding a high-growth subscription features tier in acquiring over 2,000 paid accounts within 60 days of rolling out.
- Maintained high-availability automated validation pipelines via GitHub Actions into AWS cloud computing models (EC2, S3), executing 15 seamless hot-releases weekly while validating a strict 99.9% platform uptime baseline.

SELECTED PRODUCTION DEPLOYMENTS

Enterprise Job Board API Studio

[Live Demo](#) | [GitHub](#)

Fastify, TypeScript, PostgreSQL, Prisma, BullMQ, Redis, Docker, Swagger UI

Engineered a high-throughput job ledger service using RS256 asymmetry signing keys, optimized cursor pagination models, asynchronous background message processing infrastructure via BullMQ, full-text index lookups, and an 85% analytical assertion target via robust integration suites.

Sovereign Full-Stack E-Commerce Platform

[Live Demo](#) | [GitHub](#)

Next.js 14, TypeScript, Node.js, PostgreSQL, Stripe, AWS S3, Redis, Docker

Production e-commerce platform with storefront, Stripe checkout, and React admin panel. ISR product pages load under 1s, AWS S3 + CloudFront media delivery, real-time inventory tracking, and sales analytics dashboard.

Forge Design System (Published to npm)

[Live Demo](#) | [GitHub](#)

React 18, TypeScript, Tailwind CSS, Radix UI, Storybook 8, Commander.js, AES-256-GCM

Created a 20-component accessible component framework compliant with WCAG 2.1 AA parameters alongside a secure Command Line Interface (CLI) utility incorporating AES hardware keys integration for dev profile segregation.

EDUCATION

Northumbria University • London, UK

2024 – 2025

BSc (Hons) Computing with Artificial Intelligence Technology — First Class Honours

- **Final Year Project:** Full-Stack Portfolio CMS (Next.js 14, PostgreSQL, Prisma, Tailwind CSS) — Graded First Class.
- **Core Modules:** Advanced Web Development, Cloud Infrastructure Architecture, Modern Software Engineering Principles, Agile Project Lifecycle Management.
